

Quality Patient Care

Continuing Education

Outside of the operating rooms, the surgeons at Oral & Maxillofacial Surgical Consultants passionately provide continuing education to the dental community. We are involved in numerous organizations, including the Bloomington, Minnetonka, and Metropolitan Dental Study Clubs; the Minneapolis District Dental Society; and the Minnesota Dental Association, as well as various implant educational outreach opportunities. We offer certification in Healthcare Provider CPR and Lunch-and-Learns for implants, orthognathic surgery, and other topics. We're here to support your ongoing practice.

As a dental professional, you clearly value top-quality care for your patients. So when it comes to referring them to another practitioner, you need to be able to trust that they will receive the same high level of care they have come to expect. At Oral & Maxillofacial Surgical Consultants, we are dedicated to delivering the most advanced treatments to patients in a compassionate, attentive, and professional environment. Extensive experience in producing high-quality results has led our team of Twin Cities doctors to become valued as trust-worthy leaders in oral surgery. And because we take emergency calls 24/7 for post-operative care, we're here when patients need us most.

Quality of Care/Anesthesia

Experience and the Highest Standard of Care

OMSC's roots and foundation are based on the same principal fundamentals that founded the practice back in 1970. Our mission continues to be simple: Provide the best possible oral & maxillofacial surgical care. We feel this is accomplished by prioritizing patient safety and practicing evidence based dentistry, medicine, and surgery.

We continue to practice full scope oral and maxillofacial surgery, with the exception of definitive management of malignant pathology and cosmetic surgery. The mainstay of our practice remains dentoalveolar and dental implant surgery. Within our group, we continue to sub-specialize in the areas of orthognathic surgery, reconstruction, benign pathology, TMJ, and cleft alveolar repair.

Outside of our four clinics, we continue to maintain hospital privileges for inpatient and outpatient surgical care at Fairview Southdale and Children's Hospitals. We also continue to provide call coverage at these institutions.

If your patient has a difficult problem or management scenario that is better served at a tertiary care center, we have excellent relationships with the University of Minnesota, Hennepin County Medical Center, and the Mayo Clinic. We also have relationships with many providers outside dentistry should alternative specialists be needed.

Your patient may have fear and anxiety about their surgical care. The doctors and staff of OMSC take pride in making each patient's experience relaxed and positive. For your patient's comfort, we provide a full array of anesthetic choices based on their need.
